Formulated to Perform.
WOOD FRAME PRODUCTS
**Residential Woodframe**

Wood frame remains a very popular method of construction. Both cost-effective and sustainable, wood frame structures for residential multi-family, dormitories, senior housing, and more are prevalent. Building codes, including the International Building Code® (IBC) and Canada’s National Building Code, include provisions for building out of wood, including structures up to five or six stories in height. As these structures soar to new heights, proper firestopping is essential, and we can help.

**RTC Intumescent Firestop Collars**

RTC Firestop Collars are adjustable collars sized for 3” and 4” trade size plastic pipes or 3” or 4” trade size plastic pipe couplings.

**LCC Intumescent Firestop Collars**

SpecSeal® LCC Firestop Collars are factory-manufactured firestop devices sized to plastic pipes of up to 4” Trade Size. LCC Collars consist of a restraining collar with a factory applied intumescent ensuring the correct amount of material is applied every time.

**Intumescent Firestop Caulk**

WF300 Intumescent Firestop Caulk is a latex-based firestop caulk designed for residential wood frame construction. WF300 Caulk is tested for addressing penetrations through wood/frame construction such as wood stud walls and floor/ceiling assemblies. Under fire exposure, WF300 expands to up to four times its original volume.

**Putty Pads**

SpecSeal® SSP Firestop Putty Pads consist of non-hardening putty that can be used to seal the outside surfaces of electrical boxes. In addition to fire protection, they provide optimal sound attenuation.

**PowerShield® Electrical Box Insert**

Electrical box inserts install inside electrical boxes to prevent the spread of fire from room-to-room. Box inserts can be installed onsite or at a fab shop so that boxes show up pre-firestopped.
SmokeBlock® Fireblock & Draftstop Caulk

SmokeBlock® Caulk is a non-combustible gun grade sealer for fireblocking and draftstopping in non-fire-rated wood frame walls and floors. It meets ASTM E136. Not suitable for use in fire-rated construction.

SpecSeal® Fireblocking Foam installs in seconds preventing the spread of smoke and toxic gasses. SmokeBlock® Fireblocking Foam can be applied filling voids and annular spaces around penetrants (minimum quantities required) 1 N/A 2.72 lbs (1.23 kg)

EP Powershield™ Electrical Box Insert
